

VIVIAN QUEK JIA YI

ABOUT ME

I am a junior system developer with experience in full-stack web development, IT support, system deployment, and machine learning projects. I build backend systems and web applications, support production environments, and handle system troubleshooting. I enjoy learning new technologies. Currently, I am open to opportunities in software development, IT support, and data/AI-related roles.

WORK EXPERIENCE

Stealth Startup (Remote)

JAN 2026 - PRESENT

Full Stack Web Developer

- **Client-Centric Web Solutions:** Consult directly with clients to architect and deploy responsive personal and business websites, translating complex requirements into high-performance applications

Panda Software House Sdn. Bhd.

MAR 2024 - DEC 2025

Software Development Engineer

- **Rebate Income Management System (RIMS):** Architected the backend from scratch to manage trading term agreements and claims; automated cloud dataset aggregation to ensure seamless integration into financial rebate records.
- **Sublet Rental Management System:** Automated tenant billing, lot status, and tenancy workflows using RESTful APIs and Cronjobs; integrated AutoCount MSSQL servers to sync accounting statements across multiple platforms.
- **E-Invoicing Portal:** Streamlined retailer onboarding via automated scripts, drastically reducing onboarding friction and technical support tickets for B2B transactions.
- **System Synchronization & Support:** Managed real-time data sync between backend database systems and accounting platforms while collaborating across teams to resolve high-priority support tickets.

Moabi PLT

MAY 2022 - AUG 2022

Frontend Web Developer Intern

- **MakanHere POS System:** Developed responsive UI components using Angular, ensuring a seamless, mobile-compatible user experience for food ordering workflows.
- **Component Library & Documentation:** Built and documented isolated UI components using Storybook, improving code reusability and frontend development efficiency.
- **UI/UX Design Alignment:** Collaborated with UI/UX teams to translate Figma designs into consistent, pixel-perfect frontend components across the application.

PROJECT

Predictive Analytics & Machine/Deep Learning Research (Telecom Churn)

- **Model Development:** Built ANN and SVM churn prediction models on an imbalanced telecom dataset (Cell2Cell); optimized stability via learning rate scheduling to achieve a ~60% F1-score.
- **Feature Engineering:** Applied Chi-Square and ANOVA feature selection to reduce dimensionality, combat overfitting, and improve model generalization.
- **Publications:** Authored and published two research papers leveraging statistical feature selection and deep learning for churn prediction ([Paper 1](#) / [Paper 2](#)).

EDUCATION

AUG 2021 - OCT 2023

MULTIMEDIA UNIVERSITY

- Bachelor of Computer Science (Hons.) in Artificial Intelligence
- CGPA: 3.90 / 4.00

APR 2019 - JUL 2021

MULTIMEDIA UNIVERSITY

- Diploma in Information Technology
- CGPA: 3.98 / 4.00

SKILLS

- Python, Java, C, C++, PHP
- Django, RestAPI, FastAPI
- CodeIgniter, TypeScript
- React, Vue, Quasar, Angular
- HTML, JavaScript, CSS
- Git, Figma, Docker, Unity
- MySQL, PostgreSQL, MSSQL
- Machine / Deep Learning
- Linux, Ubuntu, WinSCP, Putty
- Jira, Github Project, Cronjob
- Postman, Canva, Figma

LANGUAGES

- English (Fluent)
- Chinese (Native)
- Malay (Intermediate)
- Hokkien (Intermediate)
- French (Basics)
- Japanese (Basics)
