

VIVIAN QUEK JIA YI

IT Application Executive

jyquek32@gmail.com | +(60) 1110967982 | www.linkedin.com/in/vivianquekjiaiyi | Melaka, Malaysia

SUMMARY

IT Applications professional with over two and a half years of experience in software development, application ticketing, and on-call support. Proven experience in managing enterprise applications, system integration, automated workflows, data visualization, and chatbot integration. Skilled in Scrum project management and collaborating with cross-departmental stakeholders in an Agile environment.

KEY SKILLS

Programming Languages: C#, Python, JavaScript, PHP, Java, C, C++

Web & Frameworks: ASP.NET MVC, Django, FastAPI, Vue, React, Angular, CodeIgniter, Tailwind CSS

Databases & APIs: MSSQL, MySQL, REST APIs, Postman

Architecture & Automation: Microservices, Entity Core, Docker, Kubernetes, n8n

Project Management & Tools: Git, GitHub, Gitea, Trello, Jira, Confluence, Todoist, Cypress

Languages: English, Malay, Chinese, Hokkien, Japanese (Basic)

WORK EXPERIENCE

IT Executive (Applications) | Kotra Pharma (M) Sdn. Bhd.

Jun 2026 – Present

- Maintain and enhance My Kotra Pharma Portal, an existing enterprise platform for internal business services, by developing backend APIs and integrating frontend components using ASP.NET Core, C#, and Vue
- Contribute to Kotra Hub, a centralized platform integrating multiple organizational systems, supporting system integration and AI chatbot capabilities to streamline access to internal services
- Digitalize manual business processes by converting physical forms into digital workflows, including General Requisition and employee/vendor-related processes, improving process accessibility and reducing manual handling
- Automate application and data processes through scripting and workflow automation, while providing application support through ticket handling, troubleshooting, and coordination with users and stakeholders

Tech Stack: C#, ASP.NET Core, MVC, Vue, PHP, CodeIgniter4, MSSQL, Docker, Cypress, n8n

Software Development Engineer (Backend) | Panda Eco System Berhad Mar 2024 – Dec 2025

- Developed and maintained backend REST APIs for business applications, automating agreement, claims, billing, and tenancy workflows to reduce manual processing and improve operational efficiency
- Integrated database and accounting systems using MSSQL and automated data synchronization to maintain consistent financial and operational records across platforms
- Automated retailer onboarding and data processing through scripts and scheduled workflows, reducing manual intervention and technical support requirements for B2B transactions
- Supported critical business applications and system integrations, troubleshooting high-priority issues and collaborating across teams to maintain reliable system operations

Tech Stack: Python, Django, FastAPI, MySQL, MSSQL, Vue, Script Automation, Postman, Linux

EDUCATION

Bachelor of Computer Science (Hons.) in Artificial Intelligence

Aug 2021 – Oct 2023

Multimedia University (Melaka)

- Final CGPA: 3.90 / 4.00

Diploma in Information Technology

Apr 2019 – Jul 2021

Multimedia University (Melaka)

- Final CGPA: 3.98 / 4.00

PROJECTS

MyKotraPharma Portal (ePo system)

- Contribute to the transition from a monolithic application toward a microservices architecture, supporting the development of new and existing modules
- Develop backend API services using C#, ASP.NET Core, and Entity Framework to support business processes and system integration
- Develop frontend interfaces using Vue.js, TypeScript, and Vuetify for forms, listings, and module navigation
- Prepared detailed technical documentation outlining system flows and data processes

Tech Stack: C#, ASP.NET Core, MVC, Vue, MSSQL, Docker, Cypress

Kotra Hub (Centralized Enterprise System Integration Platform)

- Spearheaded the system integration initiative project to unify multiple Kotra Pharma application systems and services into a centralized digital platform
- Designed the integration approach toward a microservices-based architecture, connecting existing PHP/CodeIgniter4 applications with C#/ASP.NET Core services
- Developed script automation workflows to automate data exchange and processes across connected systems
- Integrated an AI-powered chatbot using n8n to provide a centralized interface for users to access information and services

Tech Stack: C#, ASP.NET Core, MVC, Vue, PHP, CodeIgniter4, MSSQL, n8n

Predictive Analytics & Machine/Deep Learning Research (Telecom Churn)

- Developed churn prediction models using SVM and ANN, applying data preprocessing, EDA, feature engineering, and Chi-Square/ANOVA feature selection on an imbalanced telecom dataset
- Evaluated models using precision, recall, and F1-score, achieving approximately 60% F1-score

Academic Publications

- *Customer Churn Prediction through Attribute Selection Analysis and Support Vector Machine* – JTDE, 2023
- *Predicting Churn with Filter-Based Techniques and Deep Learning* – IJECE, 2024

CURRICULAR ACTIVITIES & ACHIEVEMENTS

Second Prize, Young Scientist Challenge 2018, Taylor's University: Developed a team project exploring bicycle-generated electricity for mobile device charging

International Pen-Pal Exchange Program: Participated in cross-cultural snail mail programme with peers from Austria, Finland, Kenya, Sri Lanka, China and etc.

Huawei HCIA-AI Certification: Obtained physical certification in Artificial Intelligence and Machine Learning fundamentals

CITIC DIFCON Conference 2023: Presented research on customer churn prediction and data analysis
